

# The path to LLM adoption: Key use cases, benchmarks, and trust-building strategies

**Alex Yanishevsky**  
Senior Director,  
AI Solutions,  
Smartling

**Jason Rauchwerk**  
MT Deployment  
Engineer, Smartling

# Agenda

- How are LLMs performing today?
- Deep dive: New and updated use cases
- Opportunities for DEI
- Building trust

# How are LLMs performing today?

# Improvements in AI Post-Processing

- Updates on fuzzy match repair
  - Glossary term insertion
  - Smoothing
  - EEE (now LQE)
- How to best utilize AI Post-Processing

# AI Toolkit Recent Improvements:

## Fuzzy Match Repair

- **Fuzzy match repair and new smoothing prompt:** Introducing more robust RAG, examples from TMs in the prompt, including glossary entries explicitly. This should improve glossary issues for both FMR and machine translation smoothing.
- **State-of-the-art LLM:** Gemini Flash 2.0 is live for FMR and is more accurate than the previous generation.
- **Added threshold:** Everything that is 95% and higher is not subject to FMR.
- **Fuzzy match repair unnatural phrasing or worse than TM match:** This could be due to hallucinations or unreliable data in the TM. This can happen more on strings with numeric values and date/time. In general, this should happen in very few strings relative to all strings being processed.

# AI Toolkit Dashboard: FMR Improvements

- 25.1% improvement over original match
  - 60% original match -> 85% fuzzy match
  - Dec 2024-Mar 2025

[Source](#)

# AI Toolkit recent improvements:

## Formality, GTI and Smoothing

- **Formality Handling:** We have migrated to Gemini version, 1.5v2 Flash. In our research, using the same prompt is yielded improvements. The prompt contains instructions such as “do not go into pejorative or casual.”
- **Glossary Term Insertion:** GTI works with 80-90% accuracy depending on languages at the moment. Moving to Gemini Flash 2 will improve accuracy slightly. We have modified our prompt and research has shown additional improvement in accuracy.
- **Smoothing prompt** has been dramatically improved. We are testing LLMs other than GPT 4o to see if we get better benchmarks.

# AI Toolkit recent improvements: LQE

## Customized (Fine tuned) LQE

models are more accurate than generic LQE models by 30% or more

### Accuracy

## Precision

Of all the instances predicted as positive, how many are actually positive?

### Precision on No Error

# Best AI results for a customer

- No linguistic assets

- Somewhat consistent linguistic assets
- Meager leverage from TM
- Autoselect

- Clean, consistent, and reliable linguistic assets
- Lots of leverage from TM
- Trained MT engines

# Deep dive: New and updated use cases

# NMT vs LLM: MT use case

## NMT

- More literal
- Better adherence to brand terminology
- For human-in-the-loop, less creative content

## LLM

- More fluent and natural-sounding
- Lesser adherence to brand terminology
- For no human-in-the-loop, more creative content

## Switch?

- **Use both based on content?**
- NMT for HITL, less creative content
- LLM for no HITL, more creative content

# LLMs: Other use cases

Where can AI fit in the Translation space?

## Source editing

Editing source content for higher quality translations (e.g. UGC)

## LLM Translations

Translating directly with AI technology, like LLMs, bypassing the use of MT

## Translation augmentation

Augmenting MT translations through the use of AI during and post translation

## Localized content creation

Death to source, translations are generated directly with AI

Automated post-editing increases quality by 4-5 MQM

# Benchmarking LLMs: Evaluation versus Estimation

## Evaluation:

**You have a reference**

Source: Find Express Service Code

Reference: Encuentre el código de servicio expreso

MT: Buscar código de servicio exprés

Goal: How closely does MT match the reference? How little do I have to edit?

## Estimation:

**You do NOT have a reference.**

Source: Find Express Service Code

MT: Buscar código de servicio exprés

Goal: Is the MT a good translation of the source?

# Autoscoring

## Source string

These documents can sometimes be needed to satisfy the requirements of the customs authorities or other government bodies and agencies that have a vested interest in what leaves and enters their country.

## Human

**A veces, estos** documentos pueden ser necesarios para satisfacer los requisitos de las autoridades aduaneras u otros organismos y agencias gubernamentales que tienen un interés personal en lo que sale y entra en su país.

## Trained machine translation

Estos documentos **a** veces pueden ser necesarios para satisfacer los requisitos de las autoridades aduaneras u otros organismos y agencias gubernamentales que tienen un interés creado en lo que sale y entra en su país.

BLEU = 79.96 | Edit distance = 6.66

# Semantic scoring: Beyond textual scoring

When textual scoring fails

Let's eat, Grandmother!  
Let's eat Grandmother

| Ref                                                              | Hyp                                                                                | Words | BLEU  | PE Distance | TER % | CharacTER | ChrfScore |
|------------------------------------------------------------------|------------------------------------------------------------------------------------|-------|-------|-------------|-------|-----------|-----------|
| After lengthy deliberations, the jury found the defendant guilty | After lengthy deliberations, the jury found the defendant <b><u>not</u></b> guilty | 11    | 89.27 | 0.06        | 0.1   | 0.06      | 95.75     |
| Insert the oil extractor tube and pour gas into the engine       | Insert the oil extractor tube and pour <b><u>oil</u></b> into the engine           | 12    | 93.75 | 0.05        | 0.09  | 0.05      | 87.75     |

# Semantic scoring: Beyond textual scoring 2

## Word embeddings

1. Numerical representation of words
2. Words that are similar are plotted close to each other

Male-Female

Verb tense

Country-Capital

# Semantic scoring: Beyond textual scoring 3

## Sentence Embeddings

1. Expand concept of word embeddings to sentences
2. Consider source and target

"Lion is the king of the jungle."

"The tiger hunts in this forest."

"Everybody loves New York."

# Semantic scoring: Beyond textual scoring 4

## Sentence Embeddings

1. Lower scores indicates source and target may not match semantically
2. Erroneous information for user
3. Information may not adhere to be brand tone or style

| EN                                                                                           | FR                                                                                                   | distiluse-base-multilingual-cased-v1_cosine_sim | laser_cosine_sim | LaBSE_cosine_sim |

| <b>PETLLM_Full_Model2</b> | PTBR     | 49.12 | 13.73         | 75.43  | 0.92  | 1.48    |

# Opportunities for DEI

# AI gender debiasing and inclusive language

- **What?**

Ensure that your translated content is debiased and inclusive, such as with occupational nouns.

- **Benefit:**

Ensure that your translated content correctly references the addressed audience.

# AI gender debiasing and inclusive language

# Pronoun conversion experiment

Method 1: Masculine Source →  
Masculine Translation →  
Nonbinary/Feminine Translation

Method 2: Masculine Source →  
Nonbinary/Feminine Source →  
Nonbinary/Feminine Translation

## Feminine

## Non-binary

# AI gender debiasing and inclusive language prompt

## **Male to nonbinary (SNIPPET)**

Create a gender-neutral version of the following Spanish text using these techniques:

1. Use generic nouns (e.g., change "Es un gran logro para el hombre" to "Es un gran logro para la humanidad")
2. Use neutral pronouns (e.g., replace "Al interesado" with "A quien le pueda interesar")
3. Substitute "ser" with "estar" or rephrase (e.g., change "Estamos muy contentos con este resultado" to "Este resultado nos alegra mucho")

Examples:

Input: ````Los médicos del Hospital La Paz han recomendado un nuevo tratamiento para el dolor crónico que que promete mejorar la vida de pacientes con enfermedades avanzadas.````

Output: ````El personal médico del Hospital La Paz ha recomendado un nuevo tratamiento para el dolor crónico que promete mejorar la vida de pacientes con enfermedades avanzadas.````

# Pronoun conversion experiment conclusions

## Feminine conversion

- Over 80% success for all models
- Ready for production

## Best performing nonbinary conversion

- Total success rate of 57%
- Not ready for use

## Future progressions

- Evolution of LLMs
- Progression of nonbinary inclusivity in language

## Future experiments/developments

- Changing terminology to be more appropriate

# Building trust in LLMs

# LLMs: A precocious youngster

# Who is completely unpredictable...

| English                                                                                                      | German                                                                                                                                                                                                                                                                                                                                                               |

# Edit Effort Estimation: Under the hood

# R&D roadmap

# 2025 Research Roadmap

## RELEASED IN 2024

- **AI Translation Features**
  - Adaptive translation memory
  - Glossary term insertion with LLMs
  - Informality changes for Spanish, German, and Italian
  - LLMs for translation evaluation
  - Fine-tuning models for more accurate translation evaluations
- **Translate directly using GPT**

## IN RESEARCH AND MVP (Now)

- LLM translation smoothing
- High-performing auto-MQM
- Google PETLLM (LoRA)
- LLMs for higher quality translations
- Choose your favorite LLM
- LLM as MT provider
- Optimize handling of emojis, all caps, hashtags, brackets

## UPCOMING (Later)

- Self hosted LLMs
- Expand LLM language support
- Source content pre-editing
- Improvements for translation quality estimation
- Continued work for automating MQM
- LLM content creation
- Prompt Engineering Tools
